

## N200F

990018-P

Upper support 1", 1 1/4" and 1 1/2". PVC/Polymer.

Deck and bulkhead mount, standoff.

Adjustable upper support designed for long antennas where upper support is required. It is used as a stand-off for deck and bulkhead mount. It features a lever which can be opened for easy access to the antenna. E.g. if the antenna is to be lowered while passing under a bridge. Bolts and two readymade spacers for the mount are included in the package. The mount can be mounted on any flat surface. This support does not become static when mounted around radiating elements of the antenna. The surface may block/change the radiation pattern of the antenna.
